⇒ Join:- Take two relations and return as a result another relation.

⇒ 4 types of Join:-
- Natural Join or inner Join
- Left outer Join
- Right outer Join
- Full outer Join

⇒ Natural Join or inner Join Query:

Select *
from there Entities
where Entity.Attribute = Entity.Attribute.

⇒ View: A view provides a mechanism to hide certain data from the view of certain user.

⇒ Define view:
create view view-name as <query expression>

⇒ Integrity constraints
- not null
- primary key
- unique
- cheak (P), where p is a predicate

⇒ Authorization:
→ grant
→ revoke

① grant select on Entity to user, user, user.
② grant select on Entity to public → for all
③ revoke select on Entity to user, user.
